Omny achieves ISO 27001 certification: Showing is continued dedication to unrelenting security

Oslo, Norway, 12 February 2025 – [Omny](#) has officially achieved ISO/IEC 27001:2022 certification, underscoring its commitment to security at every level of the organization. In its first-ever certification audit, Omny earned a maturity rating of 4 out of 5 from external auditor DNV, one of the world's leading certification bodies, based on the company's solid execution and governance.

ISO/IEC 27001:2022 is the most current, internationally recognized, standard for information security management, providing organizations with a structured framework for identifying risks, implementing controls, and continuously improving security practices. For Omny, this achievement is more than a compliance checkbox – it reflects the company's security-first approach and rigorous measures embedded in its operations.

"Achieving ISO 2700 certification isn't just about passing an audit – it's about ensuring security is woven into every aspect of our organization," says Raymund Hosena, Security, Risk and Compliance Director at Omny. "From leadership decisions to engineering practices, this process touched every part of the organization. The high maturity rating we received in our first audit reflects that strong commitment from our entire team."

The ISO certification process involved internal audits, policy alignments, and organization-wide implementation of security controls. As part of its certification lifecycle, Omny will undergo annual surveillance audits and continuous improvement cycles to ensure its security measures remain ahead of evolving threats.

"Certification isn't a one-time event – it's an ongoing process of improvement," says Tommy Evensen, *CISO*, Omny. "We'll continue strengthening our security posture because we believe it reinforces our position as a trusted partner in security. It's what our customers expect from us, and it's what we expect of ourselves."
