

PRESS RELEASE

Cyviz partners with Microsoft Corporation to design, develop and deliver visual collaboration solutions to Microsoft Technology Centers worldwide – first phase valued at NOK 33 million (USD 3.9 million)

February 24, 2021

Microsoft Corporation (Redmond, Washington, U.S.) has selected Cyviz to jointly design, develop and deliver next-generation visual collaboration solutions for [Microsoft Technology Centers \(MTCs\)](#) worldwide. The MTCs are collaborative environments that provide access to innovative technologies and world-class expertise, enabling Microsoft customers and partners to envision, design, and experience products. Microsoft will standardize on Cyviz to deliver impressive customer experiences and in-depth technical engagements.

Cyviz was selected after a rigorous evaluation and testing of different technologies in the market. Microsoft based their decision on the high-performance capabilities of Cyviz software, the standardized delivery and support globally, and the long-standing track record of delivering to Fortune 500 customers. The [Cyviz Easy Software Platform](#) is built on and integrated with Microsoft technologies, including Windows IoT, Team Rooms, Azure, Exchange, Active Directory, and SQL Server.

"We are proud to be selected as a partner of Microsoft Corporation, one of the top five most valuable companies globally, according to market valuation. This contract represents a breakthrough for us within the IT sector. Cyviz is a fairly small company compared to the customers we support. Still, we have once again proven that our unique software platform is applicable for the leading companies", says CEO Espen Gylvik.

First phase rollout to U.S. Technology Centers

The first phase of the rollout will be to Microsoft's U.S. Technology Centers, followed by deployment to Europe, Middle East, and Asia-Pacific sites. Cyviz has committed to developing new technology integrations on the existing software platform that will be valuable for those designing similar facilities such as Customer Briefing Centers and Innovation Centers.

Technology Centers are critical to Microsoft's product development and customer engagements

As organizations are investing in the future, Microsoft Technology Centers will play an even more critical role for hybrid collaboration and experiences. The MTCs are designed to deliver engaging experiences that showcase new technology, connecting sites, teams and resources.

"The success of software companies is intrinsically linked to sustained innovation and rapid releases of new products. That's why they need collaborative environments like Technology Centers to engage and interact with their audience", says Peter Stewart, Cyviz President North America.

A Windows-based platform that can scale and adapt to future needs

The [Cyviz Easy Software Platform](#) ensures effective deployment, management and reliable user experiences. It offers remote support and monitoring to ensure the rooms' availability at any given time. It is the foundation that Microsoft has decided to build on, adding new capabilities and applications over time.
