

Måsøval AS - ISA virus suspected at farming site Fjølværret

27.5.2024 11:30:00 CEST | Måsøval AS | Non-regulatory press releases

ISA has been detected during a routine screening at the site Fjølværret in Frøya Municipality. Confirmation on sampling results will first be confirmed after further testing, the detection of virus is treated internally as a confirmation. Strict measures have been implemented to contain the virus and prevent further spread. Måsøval will harvest the site to reduce biological risk.

Fish on site numbers 396.000 with an average weight of 5.6 kg WFE. The site was originally planned to be fully harvested in week 26 thus the change in harvest plan will have limited effect on volumes and cost, and is expected to have little effect on price achievement.

About Måsøval AS

Måsøval is an integrated producer of Atlantic salmon with more than 50 years of operational experience. Located in Central Norway in the region west of Trondheim, Måsøval has both significant farming operations at sea and inhouse smolt production. Through its majority ownership in the processing and distribution company Pure Norwegian Seafood AS, Måsøval is processing and exporting high quality Atlantic salmon to a global marketplace.

The stock exchange announcement was published by Berit Fossan, Group Controller, at 27 May 2024 11:30 (CET).
